

ADM-13

DD/S&T-2320-63

17 December 1963

**MEMORANDUM FOR: Director, FMSAC/DD/S&T**

**SUBJECT: Article for "Studies in Intelligence"**

1. This will confirm our discussion of the other day and my invitation to you to prepare a Scientific Intelligence article for the quarterly "Studies in Intelligence" published by the Office of Training. What I had in mind and discussed with the Board of Editors was an article which might be best characterized as a "Windfall in Cuba" emphasizing the enormous technical feedback we got from low level inspection of the SS-4 system there in 1962. One might begin by describing our previous state of knowledge, how this was corrected in Cuba and an aftermath evaluation of how good our estimating process was to begin with. The level would be SECRET-NOFORN, but this should pose no problem, I believe. You are free to use lots of the photographs taken over Cuba and other material properly classified as SECRET.

25X1A

2. We would, of course, like this as soon as possible but recognize your FMSAC duties may push this off for several issues. If you wish to collaborate with some of your associates at [REDACTED] it is perfectly acceptable as the "Studies in Intelligence" is intended to be a National, professional journal for scientific and technical intelligence.

**ALBERT D. WHEELON**  
Deputy Director  
(Science and Technology)

**cc: Mr. Philip K. Edwards**
